

Smart Search Result Player 1

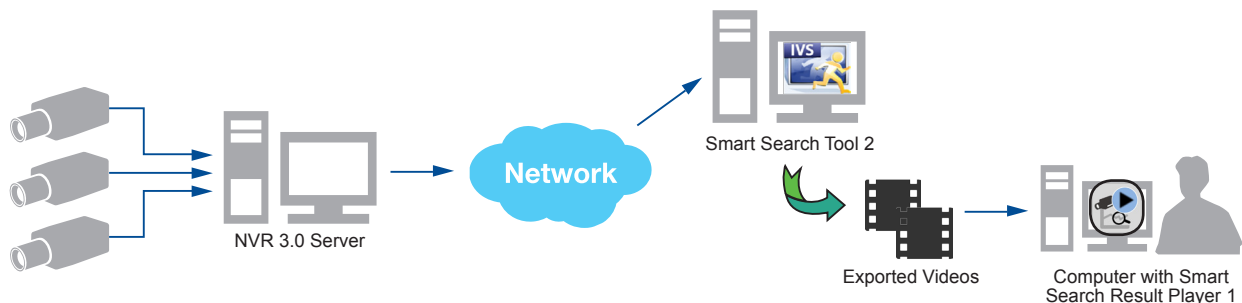

- Playback of RAW files
- Show or hide date and time of recorded video
- Show or hide previously marked algorithm regions
- Highlight objects that triggered an event
- Toggle bar to control playback

INTRODUCTION

Smart Search Result Player 1 is a media player that can play RAW-format videos exported from ACTI's Smart Search Tool. With Smart Search Result Player 1, you can watch the exported videos on any computer rather than on the server computer without losing all the previously configured algorithm regions and the analytic results, so that you will not miss any important object that triggered the events.

SOLUTION ARCHITECTURE

Smart Search Result Player 1
